CS 447: Networks and Data Communications

Instructor: Thoshitha Gamage, Ph.D.
Southern Illinois University at Edwardsville

Spring 2015 Syllabus

Course Information:
  Title: CS 447: Networks and Data Communications (3 Credits)
  Location: EB 1150
  Time: T & R 09:30 – 10:45 a.m.
  Course Web site: http://www.cs.siue.edu/~tgamage/S15/CS447

Contact Information:
  Office: EB 2050
  Phone ☎:   650-2407
  Email ✉:   tgamage@siue.edu
  Web Site ⌂:   http://www.cs.siue.edu/~tgamage
  Office Hours: M & W 02:30 – 04:00 p.m.
                      T & R 11:00 – 12:30 p.m. *or by appointment*

1   Course Objectives

This class is an undergraduate level introduction to computer networks. There are three objectives of this course. These are:

1. to acquire fundamental knowledge about underlying mechanisms in modern computer networks;
2. to become proficient in essential network programming techniques such as sockets using TCP/IP and HTML protocols through programming projects; and
3. to become familiar with theoretical methods to analyze system performance of various aspects of modern computer networks.

By the end of the semester, students are expected to be proficient in networking programming with an insight to the underlying network mechanism.

The content of this course is influenced by and was developed in accordance to the IEEE/ACM Computer Science Curriculum Guidelines (2013) http://www.acm.org/education/CS2013-final-report.pdf

2   Course Prerequisites

CS340 (Data Structure and Algorithms), CS312 (Computer Organization), and CS314 (Operating Systems), or the instructor's permission. In addition, fluency and significant experience in structured or imperative programming (e.g. C, C++, Java, Python), and **Unix/Linux** is a **MUST** for the hand-on experiments. If you do not meet these prerequisites, talk to the instructor immediately within the first week of classes. I reserve the right to drop participants from the course that do not meet these minimum prerequisites.

3   Reference Textbooks

Most of the core material of this course are derived from the following textbooks, thus they should serve as good references. Students are expected and **required** to take their own notes, and supplement those with their own reading.

[**Required**] : [**PR6e**] *"Computer Networking: A Top-Down Approach"* 6th ed., Kurose and Ross, Pearson, ISBN 0-13-285620-4

[**Optional/Supplemental**] :

[**SFR3e**] *"Unix Network Programming, Volume 1: The Sockets Networking API"*, 3nd ed., Stevens, Fenner & Rudoff, Prentice Hall, ISBN: 0131411551

- **Additional Reading** - Additional reading may be assigned as the course evolves through the semester hosted through either http://ieeexplore.ieee.org/, http://dl.acm.org/, and/or the course website.

My presentation slides and the corresponding lecture notes (which will be posted online on the course website as we move along) are heavily based on the textbooks mentioned above and other related research papers.

4 Assigned Work and Tentative Grading Policy

The following allocation of grade percentages is ***tentative***, and may change during the semester. Unless the circumstances change, I am **NOT** planning on curving the final grade.

Grading Allocation		
Exams		50%
Midterm	20%	
Final *(comprehensive!!)*	30%	
Class Participation		5%
Homework		15%
Projects		30%

Final Letter Grade	
90–100	A
80–89	B
70–79	C
60–69	D
below 60	F

4.1 Exams

All exams and quizzes will be held in the lecture room. The final is **comprehensive**.

- **Midterm** : Thursday March 05th 09:30 – 10:45 a.m.
- **Final** : Tuesday May 05th 08.00 – 09.40 a.m.

4.2 Class Participation

You are expected to **proactively** participate in in-class discussions. This aids your learning and that of your classmates, and provides valuable feedback on the lecture. Constructive and proactive participation in in-class discussions and scribing accounts for 5% of your final grade, thus I expect you to attend each and every class. Two randomly (but fairly) designated students per lecture will serve as **scribes**, and the scribe notes are due through *Moodle* within **48 hours** of the conclusion of the lecture. These notes will be available for the rest of class as a baseline set of complementary notes to your own notes. In addition, I reserve the right to take either take a roll call or conduct a pop quiz to count attendance, if required.

If you miss a class, it is *your* responsibility to find out what happened and to collect any material that was handed out in the class. Students are also **required** to check the course website and the SIUE email account regularly for any important updates.

4.3 Homework

There will be roughly ~3-4 homework assignments that will be posted on the course website. Unless otherwise stated, each homework assignment will be due within 2 weeks of posting on the course website. Homework many also include a small Wireshark (Free) experimentation component. Thus, in preparation, each student is expected to download and install Wireshark from the official website https://www.wireshark.org/download.html.

4.4 Projects

You will be given roughly ~3 hands-on network programming experiments based on DETERLab with a 2 weeks deadline. These will be posted in the course website. I will give you the option to choose a language of your choice for programming (though C++, Java, or Python is recommended) but the development platform is fixed to Unix/Linux.

5 Graduate Standing

Graduate students will be assigned regular technical reading assignments posted either through the course website or digital libraries. You are to critique the assigned paper(s) within 1 week and turn-in a typed (not hand written) summary of your critique through Moodle. A sample template for your critique summary will become available through the course website.

In addition, graduate students may have additional mandatory questions in exams and in homework assignments that could also be based on your technical readings. Unless otherwise noted, graduate students will work on their own on projects and are in general expected to have higher programmatic and technical standards. Accordingly, graduate students will be graded on separate scale.

6 Course Requirements and Policies

6.1 Attendance Policy

For unforeseen circumstances, there will be times when you are unable to attend the lecture. Thus, I allow you to miss at most 2 classes for the semester without any penalties. Medical emergencies are outside this "absentee allowance", but should be accompanied by proper documented proof of medical services. For planned absences, assignments should be turned in before the absence, rather than after. I reserve the right to lower the grade of any student who is markedly deficient in attendance and/or in in-class participation.

6.2 Late Policy

Unless otherwise noted or announced in-class, assignments (projects and homework especially) will typically have a 2 week **strong** deadline. I anticipate most submissions to be **digital** through Moodle. The submission window will open 24 hours in advance of when it's due. It will remain open for an additional 48 hours with a 15% late penalty. No assignments will be accepted beyond this penalty period.

6.3 Responsible Learning Policy

I expect *you* to *own* your degree of success in this class *and*, I expect you to contribute to the success of others. Examples:

- read outside the class on your own (strongly encouraged) in preparation for each lecture, jot down any questions your encounter on your reading, and bring those to the class as discussion points;
- be respectful of the learning environment. Refrain from activities that may disturb the flow of the lecture or the environment;
- cooperate with other students and to share your knowledge during in-class discussions. Respect the differences in learning and understanding of each other. Seek ways of taking advantage of those differences;
    - do not engage in disruptive *"little talk"* while I am conducting the lecture; if you have a concern, raise your hand and grab my attention. be respective of your colleagues time and desire to learn.
    - Put your cell phones to vibrate mode and refrain from using your computers for casual web browsing. Take full advantage of the opportunity to learn.
- If another student is confused, help him or her out without disturbing the class;
- I enjoy engaging in technical conversations with students with the goal of helping them create an accurate understanding of course material. Participating in such conversations is very favorable for your class participation grade;

- If I am systematically doing something that inhibits your learning, tell me;
- engage in *proactive learning*: speak up when you don't understand, question assumptions, relate course material to your experience outside class, seek out additional experience and reading related to the class. You must *construct* your understanding of the material;
- If a lecture point is unclear, ask questions and ask me to repeat what I said, either in class, during office hours, or by e-mail. You are probably not alone in your confusion;
- promptly review feedback you receive from me or other students; to actively clarify the feedback if the material is still unclear; and to incorporate the feedback in your future work;
- spend adequate time on the course. Adequate time includes getting enough rest so that time you spend on course tasks is well-spent time. Adequate time includes proofreading and reviewing your assignments before you hand them in;
- have high expectations of yourself: set goals for yourself and try to do your very best. Consciously think about the balance between what you do to earn a grade and what you do to learn (If I'm doing something that puts these in opposition to each other, please let me know.); and,
- check your SIUE assigned student email and the course website regularly for important class announcements.

<u>IMPORTANT</u>: I strongly discourage you getting into discussions with me about grades and how you can get a better one.

6.4   Academic Dishonesty: http://www.siue.edu/policies (3C1 & 3C2)

Do your own work. Your exams, homeworks, and programming projects are subject to the academic honor code. **DO NOT CHEAT IN ANY WAY: DO YOUR OWN WORK!**. Following activities will be considered academic dishonesty:

- submitting work (such as homework assignments and projects) done by somebody else (this includes any human/electronic sources (such as web sites));
- watching and copying your neighbors' solutions during quizzes and/or exams;
- using materials not allowed during quizzes and exams;
- using materials not allowed for the programming projects.

It is quite acceptable to ask others things like "Have you gotten this exception before?," and even have them look briefly at your stack trace and its code It is quite unacceptable, on the other hand, to have them spend hours helping develop or seriously rearrange your program's logic. And, of course, it is unacceptable for two or more people to collaboratively develop the solution for a project. If you are tempted to collaborate on projects, **DON'T!!**.

I expect you to know and observe the SIUE Student Conduct Code (3C1) and Student Academic Code (3C2). Copying of other students' work, working together on individual assignments, plagiarism of published sources and other forms of academic dishonesty will result in zero credit on the assignment for all students involved and a lower grade in the class. A second offense (across the University) will result in an automatic **F** in the course and exposes the violator to University sanctions up to and including expulsion. All offenses will be reported to Student Affairs.

6.4.1   Advice

a Don't wait until the last minute to do homework or projects. Labs get busy, computers break down, and people get sick. These are not sufficient excuses for an extension.
b Save early; save often!
c Contact me if you are confused. Don't wait for office hours; send an email.

6.5   Disability Support Services: http://www.siue.edu/dss

Any student inquiring about academic accommodations because of a disability should contact Disability Support Services so that appropriate and reasonable accommodative services can be determined and recommended. Disability Support Services is located in Student Success Center, Room 1270. Their phone number is 650-3726 and their email is disabilitysupport@siue.edu.

7   Tentative Schedule*

*Subject to adjustment and Change. I reserve the right to change topics or add an item of related interest. All changes will be announced in class.

Week	Dates	Topics	References	Assignments/Exams
01	Jan. 13, 15	Introduction and Course Overview Layered Architecture, Network Performance Measurement	**PR6e**/01	
02	Jan. 20, 22	Socket Programming Tutorial **Application Layer:** HTTP, FTP	**PR6e**/02
