CS463 : Cryptography

Instructor: Thoshitha Gamage, Ph.D.
Southern Illinois University at Edwardsville

Spring 2023 Syllabus

Course Information:
📖	Title:	CS463 : Cryptography (3 Credits)
🗪	Location:	SE 1230
🕐	Time:	M & W 03:00 – 04:15 p.m.
🌐	Course Website:	http://www.cs.siue.edu/~tgamage/courses/490S23
❈	Assignment Dropbox:	https://classes.cs.siue.edu/spring-2023

Contact Information:
🏠	Office:	EB 2045
📞	Phone:	650-2407
✉	Email:	tgamage@siue.edu
🌐	Web Site:	http://www.cs.siue.edu/~tgamage
📅	Office Hours:	M & W 09:30 – 11:30 a.m. *or by appointment*

This course is a cross listed advanced undergraduate and graduate level introduction to cryptography. This is a **research and experimentation emphasis** course with the following objectives.

1. To introduce fundamental cryptographic and cybersecurity *constructs* and *concepts*;
2. To facilitate a learning environment that strengthens participants' *theoretical* and *empirical* knowledge, and understanding through hand-on experiments;
3. To improve participants' critical thinking, reading, and writing skills;
4. To introduce *recent advances*, *broader challenges*, and *current trends* in computer security; and
5. To spur self-curiosity in and a research appetite for advanced and/or specialized topics – network, application, web, cloud, OS, etc. – in (more generally) **cybersecurity**.

By the end of the semester, students are expected to be proficient in cryptographic and computer security basics, security exploits, and defensive mechanisms that aid in their professional career advancements. The course content and topics were derived and inspired from the IEEE/ACM Cybersecurity Curricula 2017[*].

1   Course Prerequisites

MATH224 : The cryptographic component of the course is substantially formal and mathematical in context and in substance, and will either introduce or revise concepts in number theory, finite fields, modular arithmetic, probability theory, statistics, linear algebra etc.

CS447 : The computer security component of this course will leverage basic understanding of the TCP/IP stack, network communication, and network programming knowledge.

Also *fluency and significant experience* in programming (C++, Java, Python, etc.,) and **Unix/Linux** will be essential. If you do not meet these prerequisites, you **MUST** come and talk to me within the first week of classes. I reserve the right to drop you from the course if it becomes obvious that you do not meet the prerequisites.

---

[*]https://www.acm.org/binaries/content/assets/education/curricula-recommendations/csec2017.pdf

2   Textbook & Resources

[**Required**] [**PP1e**] Understanding Cryptography: A Textbook for Students and Practitioners 1st ed., Paar, Pelzl, and Preneel, Springer, ISBN 978-3-642-44649-8
My lecture notes are based on numerous textbooks from my personal library and recent literature. A complementary set of publisher provided lecture slides can be found on the course website. Additional resources along with video lectures for **PP1e** can be found at http://www.crypto-textbook.com/. I tend to favor a engineering/mathematical approach to my classroom explanations.

Students are **expected** to regularly check the course website and their SIUE email account for any important course related updates.

3   Assigned Work and Tentative Grading Policy

The following grade allocation breakdown is _**tentative**_, and may change during the semester. Unless the circumstances change, I am **NOT** planning on curving or rounding the final grade.

Grading Allocation	BS	MS
Exams	40%	40%
Midterm 01 20%		
Midterm 02 20%		
Participation & Problem Solving	10%	10%
Deterlab Experiments	30%	30%
Capstone Project	20%	
Graduate Standing Project	–	20%

Final Letter Grade	
[88 ++	A
[79–88)	B
[70–79)	C
[60–70)	D
– 60)	F

3.1   Exams

All exams and quizzes will be held in the lecture room.

- **Midterm 01** (E1) : Wednesday February 22nd 03:00 – 04:15 p.m. (75 mins)
- **Midterm 02** (E2) : Monday April 10th 03:00 – 04:15 p.m. (75 mins)

3.2   Attendance & Class Participation

You are expected to attend all live lectures and **proactively** participate in in-class discussions and Q&A. When applicable recorded video lectures and instructor scribe notes will be made available. However, such material are not meant as a substitute for missing classes, thus, pay attention during live lectures and take your own notes. Constructive and proactive participation in in-class discussions and scribing accounts for 5% of your final grade.

In general, you are expected to read the relevant sections from the reference textbook(s) in preparation for each lecture (_see Tentative Schedule below_). I will try my best to direct you to other relevant resources wherever applicable, but I fully expect you to **take the responsibility of your own learning** and come to the class as much prepared as you can.

3.3   Problem Solving

Some lectures may get supplemented with in-class problem solving sessions. In certain cases, you might be also asked to follow-up a lecture with a brief technical write-up, typically due at the beginning of next class. The frequency of these activities, will depend on the overall flow of lectures and class participation. At max, I expect there would be about ~3-5 such sessions for the whole semester.

3.4   Deterlab Experiments

You will use the DETERLab https://www.isi.deterlab.net/index.php3 infrastructure to complete 2 hands-on security experiments, each with a $2\frac{1}{2}$ weeks deadline; there will be an additional initial setup experiment with a 1 week deadline. You will be provided with login credentials to Deterlab after first day of class. Specifics of these experiments will be posted on the course website.

3.5   Technology Requirements

You are expected to have reliable Internet access on a regular basis. It is your responsibility to address any computer problems that might occur. Such problems are not an excuse for delays in meeting expectations or for missing course deadlines. At minimum, a computer with an updated operating system (Linux preferred but not required) and an updated internet browser of your choice on a stable Internet connection is expected.

3.6   Capstone Project

This course does not include a Final Exam. In its place, you are expected to complete a **themed** cybersecurity implementation project. Think of this as a (very) condensed form of your senior design and implementation project, but strictly on a cybersecurity topic. The full project scope (from proposal to final class presentation) is ~5 weeks. We might use the final exam time for project presentations as well, depending on the need. Undergraduates can team up with a maximum of 2 members per team. Important milestones for your project are:

- **Project Proposal (U1)** Due Monday April 03rd, 2023 at the beginning of class through Moodle. Your project proposal should include the following:
    1. **Executive Summary:** A high level, to-the-point summary of the project. Don't be too wordy! I should be able to read the executive summary and know exactly what you are planning to do without too much detail. The rest of the proposal will contain these details.
    2. **Plan of Attack/Execution:** Explain how you plan to execute your proposed work. This will naturally include a listing of software, software techniques, third-party software modules, or any other logistics you plan to use to achieve your target product. Be as explicit as much as possible. This will help you spell out any roadblocks you might run into.
    3. **Planned Deliverables:** This is what you are proposing to produce as your Capstone Project. Make sure to explicitly spell out your final product.
- **Project Demo/Presentation (U3)** During Week 15 and 16 (and possibly Finals Week) in class.
- **Project Report (U4)** Due Friday, May 05th 2023 through Moodle. Your final report will include the followings:
    1. Motivation and objective of the experiment.
    2. A detailed methodology of your experiment. You must be able explain the commands, tools, procedures you've used. Don't simply list the commands. I want you to explain what you've done and why you did it. Screenshots highly recommended.
    3. A detailed testing plan and test results.
    4. Justification of your observations. You must be able to justify and/or argue why (or why not) your method worked.
    5. A detailed walk-through on how to replicate your experiment and results.
    6. Final conclusions.

> **Spring 2023 Theme**
>
> This semester's theme is **Reverse Engineering** using using `radare2` https://rada.re/n/ and/or Ghidra https://ghidra-sre.org/ for this purpose. Specifically, the objective is to use these tools to analyze malware.

3.7 Graduate Standing Project

Graduate Standing Project, in essence, is an extension of the Capstone Project listed above in Sec. 3.6 that precedes with a literature survey. During the early part of the semester, the graduate students are expected to conduct a fairly comprehensive literature survey on a topic of your choosing during that would utimately lead to an implementation and/or empirical validation during the latter part of the semester. In other words, the graduate standing project has two phases: (i) A literature survey phase with the deadlines listed below; and (ii.) Implementation phase aligned with the Capstone Project listed in Sec. 3.6.

A typical graduate level research of this scope would include a fairly comprehensive literature survey that refers a minimum 15-20 *highly cited* research papers, culminating to a taxonomy **and** some empirical validation. In other words, your objective is to develop a hypothesis based on your reading and validate it with experimentation. You are free to choose a topic of your choice **relevant** to the theme of this course. Topics that intersects with Cybersecurity are **highly favorable**. Here's a short guide on `How to Read a Paper` : http://ccr.sigcomm.org/online/files/p83-keshavA.pdf.

Places to look for a research topic includes (but not limited to) IEEE FOCS, ACM STOC, ISAAC, SODA, IEEE S&P, ACM CCS, SOCG, IEEE CCC, ACM PODC, IEEE IPDPS, CSF, DSN, IEEE ICDCS, USENIX, etc. Here is an excellent sample paper very much in sync with this course: https://www.ndss-symposium.org/ndss-paper/post-quantum-authentication-in-tls-1-3-a-performance-study/.

Important milestones for your project are listed below. All assignments are due at the beginning of class through Blackboard.

- Wednesday January 25th, 2023 – A one page research proposal and a justification of your proposed research (M1).
- Wednesday March 29th 2023 – A near complete literature review along with a rough empirical validation plan (M2). In particular, how your project aligns with this semester's Capstone Project theme should be explicitly explained.
- Friday May 05th 2023 – Final report (in IEEE conference style) (M4).

You are to present your research to the class at the conclusion of your research during weeks 15 and 16. In addition, you are required to produce an IEEE conference style minimum 8-page paper of your research. A template can be found at http://www.ieee.org/conferences_events/conferences/publishing/templates.html. You are **highly encouraged** to produce your report using Latex.

I reserve the right to decide which projects meet graduate standing and to lower the grade for any projects that don't at any point during the semester; hence, make sure to clearly exchange your research ideas with me, find out about my expectations, and set yourself up for success **early** in the semester.

In addition, graduate students may have additional mandatory questions in exams. Accordingly, graduate students will be graded on separate scale. Please refer Section 3 for the scale.

4 Late Policy

Unless otherwise noted or announced in-class, all deadlines are hard deadlines and assignments are due at the beginning of class on the due date. Assignments may be turned within 48 hours *grace period* after the deadline (except any Capstone Projects) with a 20% late penalty. No assignment is accepted beyond this grace period. Graduate project milestones do not have any grace periods.

5   COVID-19 Pandemic Policies Related to Classroom Instruction (Spring 2023)

5.1   Health and Safety

The measures outlined below are required and any student who does not comply may be in violation of the *COVID-19 People-Focused Health and Safety Policy*, as well as the University's *Student Code of Conduct*.
The full text of the *COVID-19 People-Focused Health and Safety Policy* can be found here: https://www.siue.edu/policies/Covid.shtml

5.2   Classrooms, Labs, Studios, and Other Academic Spaces

Under current University policy, SIUE will only require masking in campus healthcare settings. See, https://www.siue.edu/about/announcements/coronavirus/safety-guidelines-support/index.shtml.
Individual faculty of record may determine that masking will be required in their classrooms and are asked to communicate accordingly with students. Face masks may be required in other campus sites following guidance from governing regulatory agencies.

- Students who forget to wear a face covering when masking is required will be reminded of their obligation to comply with SIUE's *COVID-19 People-Focused Health and Safety Policy* and temporarily asked to leave the class until they are able to conform to the policy. Students who forget or lose their face coverings when masking is required may may be able to obtain replacements from a friend, a faculty member, or a nearby departmental office. Face coverings are also available for purchase in the Cougar Store (MUC).
- Students who refuse to wear a face covering when masking is required will be asked to leave the classroom and referred to the Dean of Students for non-compliance with community health and safety protocols. Repeated non-compliance may result in disciplinary actions, including the student being administratively dropped from an on-ground/face-to-face course or courses without refund if no alternative course format is available.
- If a student has a documented health condition which makes wearing a face covering medically intolerable, that student should contact ACCESS to explore options with the understanding that ACCESS will not grant accommodations which excuse the need for a face covering while on campus or in the classroom. ACCESS will work with qualifying individuals to find reasonable alternatives, whenever such solutions are available. Please call or contact the ACCESS Office via email to schedule an online appointment to discuss potential alternatives. ACCESS office (Student Success Center, Room 1203, 618-650-3726, and myaccess@siue.edu).

5.3   General Health Measures

Students and employees are expected to review the siue.edu/coronavirus website (https://www.siue.edu/about/announcements/coronavirus/) to better understand prevention strategies and safety expectations.

- Students and employees are expected to maintain healthy hygiene practices.
- Students and employees are expected to follow COVID-related guidelines and directions.
- Students and employees are expected to conduct a daily health self-assessment and isolate themselves if COVID-related symptoms are present. COVID-related symptoms include:

    - Fever (100.4 degrees or above) or chills
    - Cough
    - Shortness of breath or difficulty breathing
    - Fatigue
    - Muscle or body aches
    - Headache
    - New loss of taste or smell
    - Sore throat
    - Congestion or runny nose
    - Nausea or vomiting
    - Diarrhea

5.4   Academic Integrity

Students are reminded that the expectations and academic standards outlined in the Student Academic Code (3C2) apply to all courses, field experiences and educational experiences at the University, regardless of modality or location. The full text of the policy can be found here: `https://www.siue.edu/policies/3c2.shtml`.

5.5   Recordings of Class Content

Faculty recordings of lectures and/or other course materials are meant to facilitate student learning and to help facilitate a student catching up who has missed class due to illness or quarantine. As such, students are reminded that the recording, as well as replicating or sharing of any course content and/or course materials without the express permission of the instructor of record, is not permitted, and may be considered a violation of the University's Student Conduct Code (3C1), linked here: `https://www.siue.edu/policies/3c1.shtml`.

5.6   Potential for Changes in Course Schedule or Modality

As the COVID-19 pandemic continues, there remains a possibility that planned classroom activities will need to be adjusted. Depending on circumstances and following state-issued recommendations, potential changes include alterations to distancing requirements, course modality (e.g., transition from face-to-face to online, hybrid, or hy-flex, mask wearing, in-course activities, etc). These changes would be implemented to ensure the successful completion of the course while preserving health and safety. In these cases, students may be provided with an addendum to the class syllabus that will supersede the original version. If the course schedule or modifications significantly alter expectations, a new syllabus will be issued.

6   Responsible Learning Policy

There is a no tolerance policy with regards to cheating. **Anyone caught cheating will fail the course**. Do your own work. Your exams, homework, and programming projects are subject to the academic honor code. You are expected to know and observe the SIUE Student Conduct Code (3C1) and Student Academic Code (3C2) found at `http://www.siue.edu/policies`. If you are unsure about what constitutes as plagiarism, check this website: `https://www.siue.edu/education/psychology/plagiarism.shtml`.

6.1   Online Repositories

If you intend to keep any project source code in online repositories, ensure those repositories are **private** and **only accessible to you**. By making source code publicly available to others, you might be involuntarily participating in plagiarism.

6.1.1   Advice

This course will require a substantial amount of time reading and solving problems outside of class time. It is imperative that you keep up with the assigned reading and other tasks as much as possible. If you do not, it will be very difficult to be successful in this course.

Know the information, how to approach the problem/solution, and present it in a clear and organized manner. On exams and in programming projects, you are attempting to demonstrate understanding of concepts and the ability to solve problems. If I have to try to determine **how** you came up with your answer, then you will **not** receive full credit.

The following conditions are subject to loss of some or all credit for a given problem:

- Illegible work/answers
- work/answers that cannot be easily located
- no work
- missing/incorrect units
- compile-time and/or run-time errors

Solutions which clearly demonstrate understanding of the material, but have a minor error may receive partial credit. The final score for such problems is at the discretion of the grader and/or the instructor.

    a. Don't wait until the last minute to do homework or projects. Labs get busy, computers break down, and people get sick. These are not sufficient excuses for an extension.

    b. Save early; save often!

    c. Contact me if you are confused. Don't wait for office hours; send a Discord DM or an email.

    d. I strongly discourage you from getting into discussions with me about grades and how you can get a better one. This includes emailing me about possible ways to "bump" your grade. Such requests only mean one thing; that you have already fallen behind on your own expectations.

7   Accessible Campus Community & Equitable Student Support

Students needing accommodations because of medical diagnosis or major life impairment will need to register with Accessible Campus Community & Equitable Student Support (ACCESS) and complete an intake process before accommodations will be given. Students who believe they have a diagnosis but do not have documentation should contact ACCESS for assistance and/or appropriate referral. The ACCESS office is located in the Student Success Center, Room 1270. You can also reach the office by e-mail at myaccess@siue.edu or by calling 618.650.3726. For more information on policies, procedures, or necessary forms, please visit the ACCESS website at www.siue.edu/access.

8 CS463 In a Nutshell

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
